BOILEAU GUILLAUME

Scientific Project Manager / Data & Validation | Coordination, documentation, data quality & clinical imaging ramp-up

guillaume.boileaupro@gmail.com | +33 6 59 94 85 84 | Alpes-Maritimes, FRANCE | guillaume-boileau-891b81265 | Guillaume-Boileau-2 | 0000-0002-3576-6968

EXPERIENCE

Software Engineer – Technical coordination, data quality & operational support

VEV Platform Services France

2025 – 2026 | Valbonne, France

Context: Industrial CPMS software platform connected to field infrastructure, involving application services, operational data, data flows, support activities and reliability constraints.
Objective: Contribute to the monitoring, integration and reliability of operational software services by combining data-flow analysis, incident investigation, documentation and coordination with technical teams.

- **Data quality:** Analysis of data inconsistencies, interrupted flows, unexpected behaviours and discrepancies between application data and operational reality.
- **Reconciliation mindset:** Investigation of discrepancies between flows, systems, connected equipment and expected results, with structured findings.
- **Operational support:** Incident diagnosis, root-cause analysis, preparation of follow-up elements and contribution to corrective actions.
- **Documentation:** Writing of technical findings, anomaly analyses, resolution notes and knowledge-transfer material.
- **Coordination:** Follow-up of open topics with teams, information sharing, clarification of issues and prioritisation.
- **Software development:** Contributions to TypeScript, Angular and Node.js components integrated into an operational platform.
- **Project tools:** Use of Git, Linux, Zenhub and technical documentation to track actions.

Senior R&D Engineer – Coordination, validation & scientific documentation

CNES

2023 – 2025 | Nice, France

Context: R&D and software development for the LISA ESA/NASA space mission ground segment, involving L0–L3 mission data chains, simulation, model integration, technical validation and international collaboration.
Objective: Structure, coordinate, validate and document complex technical and scientific contributions to deliver traceable, review-ready and usable outputs.

- **Project coordination:** Follow-up of technical deliverables, open issues, dependencies, deviations and review material.
- **Study management mindset:** Structuring of data, configurations, results, assumptions, versions, controls and associated documentation.
- **Validation / quality:** Definition of acceptance criteria, consistency checks, comparison rules and deviation analyses.
- **Technical documentation:** Production of review material, summaries, assumptions, limitations, results and recommendations.
- **Communication:** Interface with scientific, software and institutional contributors in an international environment.
- **Data management:** Organisation of complex datasets, traceability of inputs/outputs, result quality and reproducibility.
- **Python platform:** Development of CATpyLISA for model integration, comparison, validation and technical review. GitLab: CATpyLISA

Data Scientist – Statistics, sensor data & result validation

Universiteit Antwerpen, Belgium

2021 – 2023 | Antwerp, Belgium

Context: Data science work for precision instruments, combining sensor data, environmental noise, statistical modelling, machine learning, performance validation and technical reporting.
Objective: Develop robust workflows to analyse complex datasets, compare configurations, verify result consistency and produce technical recommendations.

- **Statistics & data analysis:** Analysis of sensor measurements, correlations, time series, uncertainties and performance impacts.
- **Data management:** Dataset structuring, consistency checking, result validation and documentation.
- **Performance validation:** Figures of merit, sensitivity analyses, configuration comparison and result qualification.
- **Machine learning:** Noise-reduction approaches using witness channels, machine learning and deep learning.
- **Reporting:** Technical summaries, visualisations, recommendations and decision-support material for international stakeholders.
- **Collaboration:** Work with scientific and technical teams in an English-speaking multicultural environment.

PROFILE

Scientific project manager / data-oriented engineer with experience in technical coordination, documentation, data quality, validation, statistics, reporting and international collaboration.
Target position: manage and contribute to pharma customer project implementation by bringing scientific rigour, action follow-up, clear documentation, data discrepancy management, meeting support, reporting and strong adherence to procedures.

- Scientific PhD background with strong data, statistics, validation and documentation culture.
- Experience coordinating contributors, tracking deliverables, analysing discrepancies, reporting and supporting operations.
- Ability to communicate with technical, business, quality and international stakeholders.
- Strong professional English, both written and spoken.
- Targeted ramp-up on clinical trials, GCP, medical imaging, study binder, PSR, site management and pharma procedures.

LANGUAGES

English

Spanish

EDUCATION

PhD in Physics

Université Côte d'Azur

2018 – 2021 | Nice, France

Selective Graduate Program in Fundamental Physics

Université Paris-Saclay

2016 – 2018 | Orsay, France

MSc in Astronomy and Astrophysics

Observatoire de Paris / Université Paris-Saclay

2017 – 2018 | Paris, France

BSc in Fundamental Physics

Université Paris-Saclay

2015 – 2016 | Orsay, France

PROFESSIONAL TRAINING

Machine Learning in Python with scikit-learn

FUN MOOC – Inria

2026 | France Université Numérique

Predictive modelling, supervised learning, model evaluation, cross-validation, metrics, pipelines and methodological/software fundamentals of machine learning in Python.

Reproducible Research: Methodological Principles for Transparent Science

Junior R&D Engineer – Scientific analysis, validation & publications

ARTEMIS, Observatoire de la Côte d'Azur

2018 – 2021 | Nice, France

Context: Applied research involving weak-signal analysis, numerical simulation, signal processing and preparation of space-mission science cases.
Objective: Develop analysis and simulation methods to produce robust, documented and usable scientific results.

- **Scientific analysis:** Processing of complex signals, numerical simulation, result comparison and sensitivity studies.
- **Validation:** Consistency checks, identification of methodological limitations and result qualification.
- **Writing:** Contributions to publications, reports, presentations and scientific documentation.
- **Communication:** Presentation of results to scientific and technical audiences.

FUN MOOC – Inria

2025 | France Université Numérique

Reproducible research, GitLab, notebooks/Jupyter, data management, computational documentation, software environments and reproducibility methods.

Continuous Professional Training – Data, AI, Software and Systems

OpenClassrooms / Coursera / FUN MOOC

2020 – 2026

Python, SQL, Machine Learning, AI, Linux, JavaScript, TypeScript, Angular, Node.js, Django, REST APIs, C/C++, data analysis, software engineering and algorithms.

PROJECTS

CATpyLISA – Coordination, validation & scientific data management

LISA ESA/NASA space mission – CNES/ESA

2023 – 2025

Python platform dedicated to model integration, data structuring, result comparison, technical validation and collaborative review of scientific workflows.
Role: technical follow-up, data structuring, model validation, documentation, deviation analysis, review preparation and coordination with multiple contributors.
Transfer to Median: study-management mindset, traceable documentation, data quality, reporting, deliverable follow-up and stakeholder communication.

VEV – Data quality, incidents & operational support

Industrial software / Data flows / Connected infrastructure

2025 – 2026

Contribution to software development, integration, incident analysis and technical documentation for services connected to field infrastructure.
Role: flow analysis, discrepancy investigation, application-behaviour validation, documentation and follow-up of corrective actions.
Transfer to Median: data inconsistency analysis, reconciliation mindset, operational support, documentation and resolution follow-up.

Statistical workflows and sensor-data validation

Sensor data / Statistics / Performance validation

2021 – 2023

Development of data workflows to analyse complex measurements, produce indicators, compare configurations and formulate technical recommendations.
Role: data analysis, statistics, performance validation, consistency checks, reporting and communication of conclusions.
Transfer to Median: statistics, data management, result quality, traceability, synthesis and English communication.

CORE SKILLS

Project management & study support

Project management | Time / scope / risk | Communication | Meeting organisation | Minutes | Project status reporting | Training records – ramp-up | Study binder – ramp-up | PSR – ramp-up | Escalation logs – ramp-up | Procedure compliance | PM good practices

Clinical research & imaging

Clinical trials – ramp-up | Clinical research – ramp-up | GCP – ramp-up | Medical imaging – ramp-up | Site management – ramp-up | Site initiation – ramp-up | Pharma industry – ramp-up | Medical data – awareness | Quality procedures

Data management & reconciliation

Data management | Data quality | Reconciliation | Inconsistency analysis | Reconciliation reports – ramp-up | Data validation | Traceability | Documentation | Statistics | Reporting | Root cause analysis

Software engineering & technical skills

Software engineering | Python | SQL | TypeScript | Angular | Node.js | Linux | Git / GitLab | Docker | CI/CD | Jupyter | pandas | Power BI

Validation, quality & documentation

Validation | Quality mindset | Procedure writing | Technical documentation | Review preparation | Issue tracking | Risk analysis | Action follow-up | Continuous improvement | Good documentation practices

Communication & collaboration

English written/oral | Cross-functional teams | Technical / business interface | Client-facing communication | Training support | Synthesis | Rigor | Organisation | International environment | Teamwork
