EXPERIENCE

Software Engineer - Data Flows, Industrial Services & Delivery Follow-up

VEV Platform Services France

2025 – 2026 | Valbonne, France

Context: Development and integration of software services for an EV charging CPMS platform connected to operational infrastructure and field equipment.
Objective: Support reliable delivery, data-flow continuity, software integration and operational follow-up between platform services, business needs and charging station systems.

- **Operational data flows:** Implemented, maintained and monitored FTP-based operational data exchange services feeding industrial platform workflows.
- **Data quality / integrity:** Checked consistency, continuity and reliability of operational data exchanges between platform services and field infrastructure.
- **Delivery follow-up:** Developed and maintained web and backend services using TypeScript, Angular and Node.js in an operational industrial environment.
- **Business / technical interface:** Translated operational issues, user feedback, data-flow constraints and equipment feedback into structured technical tasks and corrective actions.
- **Production follow-up:** Analysed service behaviour, communication issues and anomalies affecting operational continuity and data availability.
- **Issue / deviation analysis:** Identified operational gaps, prioritised corrective actions and supported follow-up of open points in a delivery-oriented context.
- **Validation:** Verified interface continuity, service behaviour and data consistency in production-like or operational conditions.
- **Coordination:** Worked with technical stakeholders to clarify priorities, monitor action items and support iterative delivery.
- **Agile tooling:** Used Zenhub to support backlog follow-up, task tracking, progress monitoring and technical coordination.
- **Industrial exposure:** Hands-on exposure to EV charging infrastructure, equipment-connected services, test support and operational constraints.

Senior R&D Engineer - Data/AI Workflows, Program Coordination & Validation

CNES, Laboratoire Lagrange, Observatoire de la Côte d'Azur

2023 – 2025 | Nice, France

Context: Engineering activities for the LISA ESA/NASA space mission, involving complex software chains, model integration, simulation workflows, validation campaigns and international coordination.
Objective: Structure, coordinate and validate complex data / AI-like workflows under strong consistency, traceability, quality, reproducibility and decision-support constraints.

- **Program / project coordination:** Coordinated technical activities involving contributors, research engineers, technicians and Master's thesis interns, with progress follow-up and deliverable consolidation.
- **Data workflow strategy:** Structured priorities, validation logic, expected outputs, milestones and technical acceptance criteria for large-scale data and simulation workflows.
- **Data / AI platform:** Developed CATpyLISA, a Python platform for large-scale model integration, comparison, validation and technical review. GitLab: CATpyLISA
- **Data quality & integrity:** Designed consistency checks, comparison campaigns and validation workflows to ensure robustness, traceability and reliability of technical outputs.
- **Decision-support data:** Consolidated analysis results, model comparisons, validation status and open points into material supporting technical decisions.
- **Risks & deviations:** Identified inconsistencies, limiting factors, data-quality issues and technical risks affecting reliability, progress or delivery quality.
- **Reporting / steering:** Produced technical notes, validation summaries, analysis reports, progress material and review supports for contributors and stakeholders.
- **Governance logic:** Supported traceability, documentation, versioned workflows, reproducibility and evidence consolidation across the analysis chain.
- **Documentation:** Used Confluence to support technical documentation, coordination notes, validation follow-up and knowledge sharing.
- **Stakeholder alignment:** Worked at the interface between scientific requirements, software development, data processing, modelling assumptions and mission-level objectives.
- **International environment:** Operated in a collaborative framework requiring technical English, structured communication and versioned workflows.

Data Scientist - Technical Studies, Performance Analysis & Project Reporting

Universiteit Antwerpen, Belgium

2021 – 2023 | Antwerp, Belgium

Context: Data analysis and performance studies for precision instruments in a high-requirement international environment linked to gravitational-wave detector performance.
Objective: Identify, characterize and mitigate factors affecting system sensitivity using statistical, computational and validation-oriented methods.

PROFILE FOR MATAWAN SERVICES

Data / AI Program Manager profile with strong experience in complex data workflows, project coordination, data-quality validation, technical documentation, reporting and stakeholder alignment. Background developed through international scientific and space-mission programs, reinforced by recent industrial software experience involving operational data flows, production follow-up and business/technical coordination. For a **Program Manager Data / AI** role, I bring a hybrid profile combining data expertise and project leadership: structuring data initiatives, coordinating contributors, translating needs into actionable roadmaps, ensuring data quality and traceability, supervising delivery from cadrage to validation, and producing clear steering material for decision-making.

- Strong fit with Data / AI program activities: roadmap structuring, portfolio follow-up, data-quality monitoring, validation logic, KPI-style reporting and stakeholder coordination.
- Experience coordinating multidisciplinary contributors across software, data, modelling, validation, operational constraints and decision-support objectives.
- Ability to translate business needs, technical constraints, data anomalies and quality issues into structured actions, deliverables and follow-up.
- Strong analytical ability to investigate data inconsistencies, identify risks, assess impacts and converge toward pragmatic corrective actions.
- Practical experience with Python, SQL foundations, data workflows, Git-based collaboration, Linux environments, documentation and operational monitoring.
- Familiar with Agile delivery contexts, backlog follow-up, Jira-style issue tracking, Confluence documentation and technical reporting.
- Comfortable working in English and in multidisciplinary / international environments involving technical and non-technical stakeholders.

FIT FOR DATA / AI PROGRAM MANAGEMENT

- Relevant background for data-project phases: cadrage, needs analysis, workflow structuring, implementation follow-up, validation, quality checks and delivery support.
- Strong experience producing technical documentation, validation reports, progress summaries, steering supports and decision-support material.
- Experience coordinating contributors, clarifying priorities, identifying risks, analysing deviations and supporting corrective actions.
- Practical understanding of data and software components: Python pipelines, SQL basics, APIs, data flows, backend services, Linux, Git/GitLab, CI/CD and monitoring.
- Experience at the interface between data quality, software behaviour, operational constraints, stakeholder expectations and reliable decision-support outputs.
- Comfortable with collaborative and project tools including Git/GitLab, GitHub, Confluence, Zenhub, JIRA-style issue tracking, Trello awareness, Excel and Power BI awareness.

LANGUAGES

English	●●●●○
Spanish	●●○○○

EDUCATION

- **Data analysis:** Analysed instrumental and environmental datasets impacting system sensitivity, stability and measurement quality.
- **Data pipelines:** Developed Python-based pipelines for noise source identification, uncertainty estimation and statistical modelling.
- **Quality / integrity:** Evaluated robustness, uncertainty and consistency of analysis outputs to support reliable technical conclusions.
- **Data-driven decisions:** Analysed measurement and simulation outputs to identify abnormal behaviours, dominant contributors and prioritisation paths.
- **Documentation:** Produced reproducible and traceable technical analyses for international engineering and research stakeholders.
- **Coordination:** Communicated complex data-driven results through structured reporting, presentations and collaborative review.

Junior R&D Engineer - Simulation, Software Workflows & Validation

ARTEMIS, Observatoire de la Côte d'Azur

2018 – 2021 Nice, France

Context: Engineering and analysis activities for gravitational-wave mission preparation, involving signal analysis, simulation, software workflows and noise characterization.
Objective: Develop robust analysis methods and validation workflows for complex signals and demanding system environments.

- **Large-scale data workflows:** Built simulation approaches for complex signal environments, uncertainty studies and large-scale datasets.
- **Validation:** Compared simulated outputs, model behaviours and analysis results to assess consistency, robustness and data reliability.
- **Technical investigations:** Investigated noise sources through cross-sensor correlation analyses in diagnostic contexts.
- **Performance analysis:** Supported the identification of limiting factors affecting mission-level performance and system sensitivity.
- **Scientific computing:** Developed strong expertise in Python-based analysis, modelling, documentation and reproducible workflows.

PhD in Physics

Université Côte d'Azur

2018 – 2021 Nice, France

Selective Graduate Program in Fundamental Physics (Magistère)

Université Paris-Saclay

2016 – 2018 Orsay, France

MSc in Astronomy and Astrophysics

Observatoire de Paris / Université Paris-Saclay

2017 – 2018 Paris, France

BSc in Fundamental Physics

Université Paris-Saclay

2015 – 2016 Orsay, France

PROFESSIONAL TRAINING

Supervised Machine Learning (Regression & Classification)

DeepLearning.AI - Andrew Ng

2020 Coursera

Machine Learning in Python with scikit-learn

FUN MOOC – Inria

2026 France Université Numérique

Predictive modelling, supervised learning, model evaluation, cross-validation, metrics, pipelines and practical machine learning workflows with Python and scikit-learn.

Recherche reproductible : principes méthodologiques pour une science transparente

FUN MOOC – Inria

2025 France Université Numérique

Continuous Professional Training – Software, Data, AI and Systems

OpenClassrooms

2024 – 2026

Python, SQL, Machine Learning, AI, scikit-learn, data analysis, model evaluation, Linux, JavaScript, TypeScript, Angular, Node.js, Django, REST APIs, C/C++, algorithms and software engineering fundamentals.

PROJECTS

CNES / LISA – Data / AI Workflows, Program Coordination & Validation

ESA/NASA Space Mission - Large-scale International Collaboration

2023 – 2025 Nice, France

Coordination and structuring of data-processing, model-integration and validation workflows for the LISA space mission within a large international engineering and scientific collaboration.
Program management relevance: Cadrage of data activities, contributor coordination, roadmap and validation planning, delivery follow-up, risk identification, reporting, documentation and stakeholder alignment.
Data / AI relevance: Work involving complex data-processing chains, model integration, reproducible environments, GitLab-based development, technical documentation, validation evidence, indicators and versioned deliverables.
Scale: Major international space mission with an estimated budget of approximately 2 billion EUR over 10 years.

Einstein Telescope / LIGO–Virgo–KAGRA – Technical Studies & Collaborative Project Workflows

International Collaborations

2021 – 2023 Antwerp, Belgium

Contribution to collaborative developments in data analysis, software methods and technical investigations within large-scale international scientific and engineering collaborations.
Project management relevance: Coordination of technical studies, reporting, documentation, contribution to collaborative review, prioritisation of analysis tasks and communication with international stakeholders.

System impact: Studies on environmental and instrumental noise sources supporting the identification of performance limitations and design constraints for next-generation gravitational-wave observatories.
