EXPERIENCE

Software Engineer - IT Delivery, Process Follow-up & Operational Support

VEV Platform Services France

📅 2025 – 2026

📍 Valbonne, France

Context: Development and integration of software services for an EV charging CPMS platform connected to operational infrastructure, field equipment and business-facing services.

Objective: Improve reliability of delivery, incident follow-up, operational data-flow continuity and collaboration between technical stakeholders.

- **IT delivery follow-up:** Developed and maintained web and backend services using TypeScript, Angular and Node.js in an operational industrial environment.
- **Process analysis:** Analysed existing practices around incidents, data exchanges, operational constraints, task follow-up and technical deliverables.
- **Operational methods:** Structured corrective actions from user feedback, production issues, field-equipment constraints and data-flow anomalies.
- **Incident / issue management:** Investigated service behaviour, communication issues, interface interruptions and operational deviations affecting service continuity.
- **Data-flow reliability:** Implemented, maintained and monitored FTP-based operational data exchange services supporting industrial workflows.
- **Validation / acceptance:** Checked service behaviour, interface continuity and data consistency in production-like or operational conditions.
- **Collaborative tooling:** Used Zenhub to support backlog follow-up, action tracking, iterative delivery and technical coordination.
- **Documentation support:** Formalised technical findings, open points and corrective actions to improve shared understanding and follow-up.
- **Stakeholder coordination:** Worked with technical contributors to clarify priorities, unblock issues and support pragmatic delivery decisions.

Senior R&D Engineer - Process Structuring, Validation Workflows & Technical Coordination

CNES, Laboratoire Lagrange, Observatoire de la Côte d'Azur

📅 2023 – 2025

📍 Nice, France

Context: Engineering activities for the LISA ESA/NASA space mission, involving complex software chains, model integration, simulation workflows, validation campaigns and international coordination.

Objective: Structure, document and improve collaborative methods for complex data/software workflows under strong traceability, quality, reproducibility and validation constraints.

- **Process structuring:** Designed and improved working methods for model integration, comparison campaigns, validation workflows and evidence consolidation.
- **Project coordination:** Coordinated technical activities involving contributors, research engineers, technicians and Master's thesis interns, with progress follow-up and deliverable consolidation.
- **Methods & standards:** Defined validation logic, expected outputs, review practices, acceptance criteria and reproducible workflow principles.
- **Tooling and workflows:** Developed CATpyLISA, a Python platform for large-scale model integration, comparison, validation and technical review. [GitLab: CATpyLISA](#)
- **Documentation:** Used Confluence to support technical documentation, coordination notes, validation follow-up, decision logs and knowledge sharing.
- **KPI / indicators logic:** Consolidated validation status, comparison results, deviations, open points and progress material to support steering and technical decisions.
- **Continuous improvement:** Identified inconsistencies, bottlenecks, quality issues and technical risks affecting reliability, progress or delivery quality.
- **Reporting:** Produced technical notes, validation summaries, analysis reports, progress material and review supports for contributors and stakeholders.
- **Change support:** Helped stakeholders adopt shared workflows, common documentation practices and clearer validation / review methods.
- **International environment:** Operated in a collaborative framework requiring technical English, structured communication and versioned workflows.

Data Scientist - Workflow Improvement, Technical Analysis & Reporting

Universiteit Antwerpen, Belgium

📅 2021 – 2023

📍 Antwerp, Belgium

Context: Data analysis and performance studies for precision instruments in a high-requirement international environment linked to gravitational-wave detector performance.

Objective: Develop reproducible analysis workflows, improve technical decision support and document data-driven conclusions for international stakeholders.

- **Workflow design:** Developed Python-based pipelines for noise source identification, uncertainty estimation and statistical modelling.
- **Process reliability:** Improved reproducibility, traceability and robustness of technical analyses through structured methods and documented workflows.

PROFILE FOR ALITHYA

IT process and methods profile with strong experience in structuring collaborative workflows, analysing existing practices, documenting methods, improving delivery quality and supporting cross-functional technical teams. Background developed through international space and scientific programs, reinforced by recent industrial software experience involving operational services, incident follow-up and delivery coordination.

For a **Chargé de Processus et Méthodes Informatiques** role, I bring a hybrid profile combining IT delivery understanding, analytical rigour and strong documentation culture: analysing practices, formalising processes, improving collaborative methods, supporting Agile-like workflows, tracking indicators, facilitating technical alignment and helping teams adopt clearer working practices.

- Strong fit with process-improvement activities: audit of practices, workflow structuring, documentation, KPI-style follow-up and continuous improvement.
- Experience coordinating multidisciplinary contributors across software, data, modelling, validation, operational constraints and decision-support objectives.
- Ability to translate operational issues, technical constraints and stakeholder needs into structured processes, action plans and follow-up routines.
- Strong analytical ability to investigate deviations, identify root causes, assess impacts and converge toward pragmatic improvements.
- Practical experience with Agile delivery contexts, backlog follow-up, Git-based collaboration, Confluence documentation, Zenhub and Jira-style issue tracking.
- Comfortable producing clear documentation, training-style supports, technical syntheses and steering material for varied stakeholders.

FIT FOR IT PROCESSES & METHODS

- Relevant background for analysing existing practices around project management, incidents, tools, deliverables and validation workflows.
- Strong experience designing and documenting collaborative work processes, reproducible workflows, review methods and acceptance logic.
- Experience improving methods through indicators, deviation analysis, technical risk follow-up and corrective-action tracking.
- Practical understanding of IT environments: applications, APIs, backend services, data flows, Linux, Git/GitLab, Docker, CI/CD and monitoring.
- Familiar with Agile / Kanban delivery contexts, backlog follow-up, documentation practices and cross-functional coordination.
- Strong fit with change support through documentation, knowledge sharing, user guidance, structured communication and stakeholder alignment.

LANGUAGES

English

Spanish

EDUCATION

PhD in Physics

Université Côte d'Azur

📅 2018 – 2021

📍 Nice, France

- **Audit-like analysis:** Analysed instrumental and environmental effects impacting system sensitivity, stability and measurement quality.
- **KPI-style reporting:** Synthesised performance indicators, deviations and dominant contributors into actionable technical conclusions.
- **Documentation:** Produced reproducible and traceable technical analyses for international engineering and research stakeholders.
- **Communication:** Communicated complex technical results through structured reporting, presentations and collaborative review.

Junior R&D Engineer - Simulation, Software Workflows & Validation

ARTEMIS, Observatoire de la Côte d'Azur

📅 2018 – 2021

📍 Nice, France

Context: Engineering and analysis activities for gravitational-wave mission preparation, involving signal analysis, simulation, software workflows and noise characterization.

Objective: Build robust analysis methods and validation practices for complex signals and demanding system environments.

- **Workflow formalisation:** Built simulation approaches for complex signal environments, uncertainty studies and large-scale datasets.
- **Validation methods:** Compared simulated outputs, model behaviours and analysis results to assess consistency, robustness and reliability.
- **Technical investigations:** Investigated noise sources through cross-sensor correlation analyses in diagnostic contexts.
- **Continuous improvement mindset:** Identified limiting factors affecting mission-level performance and proposed analysis improvements.
- **Scientific computing:** Developed strong expertise in Python-based analysis, modelling, documentation and reproducible workflows.

PROFESSIONAL TRAINING

Machine Learning in Python with scikit-learn

FUN MOOC – Inria

📅 2026

📍 France Université Numérique

Predictive modelling, supervised learning, model evaluation, cross-validation, metrics, pipelines and practical machine learning workflows with Python and scikit-learn.

Recherche reproductible : principes méthodologiques pour une science transparente

FUN MOOC – Inria

📅 2025

📍 France Université Numérique

Reproducible research, GitLab, notebooks, data management, computational documentation, reproducible software environments and methodological transparency.

Supervised Machine Learning (Regression & Classification)

DeepLearning.AI – Andrew Ng

📅 2020

📍 Coursera

Continuous Professional Training – Software, Data, AI and Systems

OpenClassrooms

📅 2024 – 2026

Python, SQL, Machine Learning, AI, Linux, JavaScript, TypeScript, Angular, Node.js, Django, REST APIs, data analysis, algorithms, C/C++ and software engineering fundamentals.

PROJECTS

CNES / LISA – Process Structuring, Documentation & Validation Workflows

ESA/NASA Space Mission – Large-scale International Collaboration

📅 2023 – 2025

📍 Nice, France

Structuring of software, data-processing and validation workflows for the LISA space mission within a large international engineering and scientific collaboration.

Process / methods relevance: Analysis of existing practices, workflow formalisation, contributor coordination, validation planning, documentation, action follow-up, risk identification and stakeholder alignment.

IT relevance: Work involving complex software workflows, GitLab-based development, reproducible environments, technical documentation, validation evidence, indicators and versioned deliverables.

Scale: Major international space mission with an estimated budget of approximately 2 billion EUR over 10 years.

Einstein Telescope / LIGO–Virgo–KAGRA – Technical Studies & Collaborative Project Workflows

International Collaborations

📅 2021 – 2023

📍 Antwerp, Belgium

Contribution to collaborative developments in data analysis, software methods and technical investigations within large-scale international scientific and engineering collaborations.

Methods relevance: Documentation of technical studies, progress reporting, collaborative review, prioritisation of analysis tasks and communication with international stakeholders.

System impact: Studies on environmental and instrumental noise sources supporting the identification of performance limitations and design constraints for next-generation gravitational-wave observatories.

Selective Graduate Program in Fundamental Physics (Magistère)

Université Paris-Saclay

📅 2016 – 2018

📍 Orsay, France

MSc in Astronomy and Astrophysics

Observatoire de Paris / Université Paris-Saclay

📅 2017 – 2018

📍 Paris, France

BSc in Fundamental Physics

Université Paris-Saclay

📅 2015 – 2016

📍 Orsay, France

STRENGTHS

IT processes, methods & continuous improvement

- IT Process Improvement
- Methods Structuring
- Continuous Improvement
- Process Documentation
- Workflow Optimisation
- Practice Analysis
- Gap Analysis
- Incident Follow-Up
- Deliverable Follow-Up
- Action Plans
- KPI Follow-Up
- Indicator Follow-Up
- Audit Awareness
- Quality Follow-Up
- Change Support
- Knowledge Sharing

Agile, project coordination & tooling

- Agile
- Scrum Awareness
- Kanban Awareness
- SAFe Awareness
- Backlog Follow-Up
- JIRA
- Confluence
- Zenhub
- Trello Awareness
- Git / GitLab
- GitHub
- Project Coordination
- Workshop Facilitation
- Stakeholder Alignment
- Cross-Functional Coordination
- Progress Reporting

IT, data & technical environment

- Information Systems
- Applications
- Software Workflows
- Data Flows
- APIs
- REST API
- Python
- SQL
- Linux
- Docker
- CI/CD
- TypeScript
- Angular
- Node.js
- Operational Monitoring
- OpenSearch
- Power BI Awareness

Documentation, training & change management

- Technical Documentation
