EXPERIENCE

Software Engineer - Digital Delivery, User Support & Change Enablement

VEV Platform Services France

2025 - 2026

Valbonne, France

Context: Development and integration of software services for an EV charging CPMS platform connected to operational infrastructure, field equipment and business-facing services.

Objective: Support digital service delivery, operational adoption, incident follow-up and collaboration between technical stakeholders and users.

- **Digital delivery:** Developed and maintained web and backend services using TypeScript, Angular and Node.js in an operational industrial environment.
- **Usage and process analysis:** Analysed existing practices around incidents, data exchanges, operational constraints, user feedback, task follow-up and technical deliverables.
- **Change support:** Structured corrective actions and user-oriented explanations from feedback, production issues, field-equipment constraints and data-flow anomalies.
- **Incident / issue management:** Investigated service behaviour, communication issues, interface interruptions and operational deviations affecting service continuity.
- **Data-flow reliability:** Implemented and monitored FTP-based operational data exchange services supporting industrial workflows.
- **Validation / acceptance:** Checked service behaviour, interface continuity and data consistency in production-like or operational conditions.
- **Collaborative tooling:** Used Zenhub to support backlog follow-up, action tracking, iterative delivery and technical coordination.
- **Documentation and support:** Formalised technical findings, open points, corrective actions and usage-oriented explanations to improve shared understanding and follow-up.
- **Stakeholder coordination:** Worked with technical contributors to clarify priorities, unblock issues and support pragmatic delivery decisions.

Senior R&D Engineer - Digital Transformation, Methods & Stakeholder Enablement

CNES, Laboratoire Lagrange, Observatoire de la Côte d'Azur

2023 - 2025

Nice, France

Context: Engineering activities for the LISA ESA/NASA space mission, involving complex software chains, model integration, simulation workflows, validation campaigns and international coordination.

Objective: Structure, document and improve collaborative methods for complex data/software workflows while supporting adoption, stakeholder alignment and evidence-based decision-making.

- **Transformation and methods:** Designed and improved working methods for model integration, comparison campaigns, validation workflows and evidence consolidation.
- **Functional coordination:** Coordinated technical activities involving contributors, research engineers, technicians and Master's thesis interns, with progress follow-up, stakeholder alignment and deliverable consolidation.
- **Governance logic:** Defined validation logic, expected outputs, review practices, acceptance criteria and reproducible workflow principles.
- **Tooling and workflows:** Developed CATpyLISA, a Python platform for large-scale model integration, comparison, validation and technical review. [GitLab: CATpyLISA](#)
- **Documentation:** Used Confluence to support technical documentation, coordination notes, validation follow-up, decision logs and knowledge sharing.
- **KPI / indicators logic:** Consolidated validation status, comparison results, deviations, open points and progress material to support steering and technical decisions.
- **Continuous improvement:** Identified inconsistencies, bottlenecks, quality issues and technical risks affecting reliability, progress or delivery quality.
- **Reporting:** Produced technical notes, validation summaries, analysis reports, progress material and review supports for contributors and stakeholders.
- **Change enablement:** Helped stakeholders adopt shared workflows, common documentation practices, clearer validation / review methods and reusable support material.
- **International environment:** Operated in a collaborative framework requiring technical English, structured communication and versioned workflows.

Data Scientist - Data Adoption, Technical Analysis & Reporting

Universiteit Antwerpen, Belgium

2021 - 2023

Antwerp, Belgium

Context: Data analysis and performance studies for precision instruments in a high-requirement international environment linked to gravitational-wave detector performance.

Objective: Develop reproducible analysis workflows, support data-driven decision-making and communicate complex technical conclusions to international stakeholders.

- **Data workflow design:** Developed Python-based pipelines for noise source identification, uncertainty estimation and statistical modelling.

PROFILE FOR EXAKIS NELITE

Digital transformation and change-management profile with strong experience in structuring methods, analysing user and stakeholder needs, documenting processes, producing support material and helping multidisciplinary teams adopt clearer ways of working. Background developed through international scientific, software and industrial environments, reinforced by operational digital delivery experience.

For a **Senior Change Management Consultant** role, I bring a hybrid profile combining technical depth, communication, pedagogy and transformation support: framing needs, analysing impacts, mapping use cases, structuring governance and adoption trajectories, producing documentation and training-style material, facilitating workshops and supporting users or stakeholders through complex digital changes.

- Strong fit with change-management activities: needs analysis, impact assessment, use-case mapping, adoption support, documentation and communication material.
- Experience translating complex technical topics into clear explanations, support material, decision aids and stakeholder-facing documentation.
- Ability to interact with technical experts, operational contributors, project stakeholders and decision-makers in international contexts.
- Practical experience supporting new workflows, shared practices, governance logic and continuous improvement in software/data environments.
- Comfortable with digital transformation topics around data, AI, software tools, collaborative workflows, user support and operational adoption.
- Strong written and oral communication, with a rigorous and pedagogical approach to complex heterogeneous environments.

FIT FOR CHANGE MANAGEMENT

- Relevant background for framing transformation needs, analysing impacts, structuring target practices and defining pragmatic adoption trajectories.
- Strong experience producing documentation, guides, review material, communication supports, reporting summaries and training-style explanations.
- Experience facilitating alignment across stakeholders through workshops, technical reviews, progress meetings and collaborative decision-making.
- Practical understanding of digital environments: applications, APIs, data flows, Python, SQL, Git/GitLab, Jira-style tools, Confluence, Linux, CI/CD and monitoring.
- Strong fit with governance and usage strategies through process definition, documentation standards, KPI follow-up and continuous-improvement loops.
- Able to bridge business needs, user constraints and technical implementation topics in data, AI, software and operational IT contexts.

MICROSOFT & DIGITAL AWARENESS

- Familiar with professional digital collaboration environments, Office tools, documentation practices, reporting supports and user-oriented communication.
- Strong ability to ramp up on Microsoft ecosystem topics such as Microsoft 365, Azure, Power Platform, Copilot / AI usage and cloud-oriented transformation contexts.
- Relevant technical culture in AI, data, software engineering, cybersecurity awareness and cloud/infrastructure concepts.

LANGUAGES

- **Process reliability:** Improved reproducibility, traceability and robustness of technical analyses through structured methods and documented workflows.
- **Audit-like analysis:** Analysed instrumental and environmental effects impacting system sensitivity, stability and measurement quality.
- **KPI-style reporting:** Synthesised performance indicators, deviations and dominant contributors into actionable technical conclusions.
- **Documentation:** Produced reproducible and traceable technical analyses for international engineering and research stakeholders.
- **Communication and pedagogy:** Communicated complex technical results through structured reporting, presentations and collaborative review.

Junior R&D Engineer - Simulation, Software Workflows & Validation

ARTEMIS, Observatoire de la Côte d'Azur

📅 2018 – 2021

📍 Nice, France

Context: Engineering and analysis activities for gravitational-wave mission preparation, involving signal analysis, simulation, software workflows and noise characterization.

Objective: Build robust analysis methods and validation practices for complex signals and demanding system environments.

- **Workflow formalisation:** Built simulation approaches for complex signal environments, uncertainty studies and large-scale datasets.
- **Validation methods:** Compared simulated outputs, model behaviours and analysis results to assess consistency, robustness and reliability.
- **Technical investigations:** Investigated noise sources through cross-sensor correlation analyses in diagnostic contexts.
- **Continuous improvement mindset:** Identified limiting factors affecting mission-level performance and proposed analysis improvements.
- **Scientific computing:** Developed strong expertise in Python-based analysis, modelling, documentation and reproducible workflows.

PROFESSIONAL TRAINING

Machine Learning in Python with scikit-learn

FUN MOOC – Inria

📅 2026

📍 France Université Numérique

Predictive modelling, supervised learning, model evaluation, cross-validation, metrics, pipelines and practical machine learning workflows with Python and scikit-learn.

Recherche reproductible : principes méthodologiques pour une science transparente

FUN MOOC – Inria

📅 2025

📍 France Université Numérique

Reproducible research, GitLab, notebooks, data management, computational documentation, reproducible software environments and methodological transparency.

Supervised Machine Learning (Regression & Classification)

DeepLearning.AI – Andrew Ng

📅 2020

📍 Coursera

Continuous Professional Training – Software, Data, AI and Systems

OpenClassrooms

📅 2024 – 2026

Python, SQL, Machine Learning, AI, Linux, JavaScript, TypeScript, Angular, Node.js, Django, REST APIs, data analysis, algorithms, C/C++ and software engineering fundamentals.

PROJECTS

CNES / LISA – Digital Methods, Change Enablement & Validation Workflows

ESA/NASA Space Mission - Large-scale International Collaboration

📅 2023 – 2025

📍 Nice, France

Structuring of software, data-processing and validation workflows for the LISA space mission within a large international engineering and scientific collaboration, with strong focus on adoption, documentation and stakeholder alignment.

Change-management relevance: Analysis of existing practices, workflow formalisation, contributor coordination, adoption support, documentation, action follow-up, impact analysis and stakeholder alignment.

Digital transformation relevance: Work involving complex software workflows, GitLab-based development, reproducible environments, technical documentation, validation evidence, indicators and versioned deliverables.

Scale: Major international space mission with an estimated budget of approximately 2 billion EUR over 10 years.

Einstein Telescope / LIGO–Virgo–KAGRA – Technical Studies & Collaborative Project Workflows

International Collaborations

📅 2021 – 2023

📍 Antwerp, Belgium

Contribution to collaborative developments in data analysis, software methods and technical investigations within large-scale international scientific and engineering collaborations.

English

Spanish

EDUCATION

PhD in Physics

Université Côte d'Azur

📅 2018 – 2021

📍 Nice, France

Selective Graduate Program in Fundamental Physics (Magistère)

Université Paris-Saclay

📅 2016 – 2018

📍 Orsay, France

MSc in Astronomy and Astrophysics

Observatoire de Paris / Université Paris-Saclay

📅 2017 – 2018

📍 Paris, France

BSc in Fundamental Physics

Université Paris-Saclay

📅 2015 – 2016

📍 Orsay, France

Transformation relevance: Documentation of technical studies, progress reporting, collaborative review, prioritisation of analysis tasks and communication with international stakeholders.

System impact: Studies on environmental and instrumental noise sources supporting the identification of performance limitations and design constraints for next-generation gravitational-wave observatories.
